

Heraldic Plaques

Computerised Design and Artwork

Using in house Artwork and design facility to ensure we provide high quality and accurate output, either working from your visuals/brief or from your own files/origination. Proofs of your shields etc, can be Emailed or posted for approval prior to a production run. Designs are PC based, however we can also work from Mac format files.

Screen Printing

Each shield is printed individually to a choice of metal finishes using hand print tables. Quality control ensures image quality and colour consistency. On average most shield design involves printing between 6 and 10 colours within the layout.

Woodwork

Each shield is made individually and hand finished in our workshops. We use Medium Density Fibreboard, Sapele wood veneers, and Guarea from West African sustainable forests.

Regimental shape

With or without top scroll, shield size is 140 x 180mm Pictured with a bottom scroll only.
